

Register of Dangerous and Hazardous Substances/ Chemicals

Name of Event: Royal Canberra Show

Dates of Event: 28 February – 1 March 2020

Contact Details (Please print):

First Name:	Surname:	Position:	Company:
Phone:	Mobile:	Fax:	Email address:
Stand name:	Stand/Stall Number: Location/Area/Building:	Who is responsible for the delivery and storage of the substance/s on site? (print name):	Best contact phone number while on site:

I will have Dangerous Substances stored and/or handled while on-site at EPIC: YES / NO

If YES: please complete the table below and sign declaration.

If NO: please sign declaration

Declaration: I declare that the information provided in this form is complete, accurate and true to the best of my knowledge.

Name (please print): Position/Title:

Signature: Date:

All exhibitors/vendors/contractors must keep the information provided on this 'Register' including the material safety data sheets (MSDS) at your stand/location while setting up and during the event.

You must also provide a copy of the Register and the MSDS to your event organiser.

WorkSafe ACT may undertake an inspection and request this information.

To comply with requirements of the Dangerous Substances (General) Regulation 2004 certain dangerous substances – you must include the following classes of dangerous substances (listed below) in your register:

Class	Nature of Hazard	Class	Nature of Hazard
1	Explosives, pyrotechnics, flares, nitroglycerene	6.1	Toxic substances
2	Gases (e.g. acetylene gas, LPG)	6.2	Infectious substances
3	Flammable liquids (e.g. unleaded petrol)	7	Radioactive substances
4	Flammable solids (cooking oils, bio diesel, ethanol, kerosene, methylated spirits)	8	Corrosive substances (e.g. bleach)
5	Oxidizing agents	9	Miscellaneous
C1	Combustible liquid – with a flashpoint of 150° C or less	C2	Combustible liquid - with a flashpoint of more than 150° C

Class: Dangerous substances are grouped into classes assigned under the ADG Code according to the nature of the hazard (see the table above). Combustible liquids are not classified as dangerous goods by the Australian Dangerous Goods (ADG) Code, but are categorised as either C1 or C2, according to their flashpoint. An example of a combustible liquid is diesel.

Subsidiary risk: Where dangerous goods present more than one hazard. An example of a subsidiary risk is a pesticide which belongs to Class 6.1 (toxic substances) that also contains a flammable solvent (Class 3) base.

Packing group (PG): The degree of danger presented by dangerous substance is signified as follows:

Packing Group I - high danger; Packing Group II - medium danger; Packing Group III - low danger

The **maximum quantity** of the dangerous substance is the actual quantity what you have or are likely to have on the premises during the event. The **expected average quantity** will reflect the usual changes in the amount of the dangerous substance over the course of the event. The figure will be less than the expected maximum quantity.

The register should also contain a list (and quantity) of all hazardous substances being used or stored at your site, eg. Johnsons hand cleaner
